DATA HANDLER

SPLASH SCREEN

DATA HANDLING SYSTEM

NAME : DESH DEEPAK CHAUDHARY
ENR NO. : 171B045
MOB. NO. : 8218740434
EMAIL : desh.chaudhary99@gmail.com
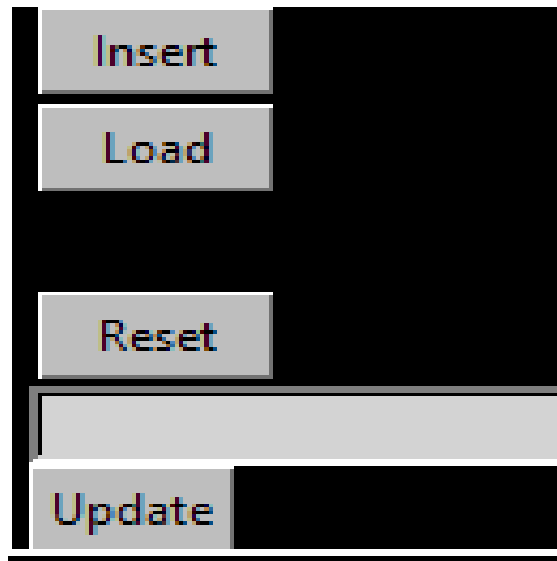

MAIN SCREEN

It manages the data provided by the user and stores them in a database which can be used to fetch details for some later use, the project doesn't specify its audience, one can use this just by opening it, it doesn't need any special requirements and can be used just by reading the instructions which pop up everytime.

It has various functions –

BUTTONS

INSERT BUTTON

Insert Button basically inserts the the entries in a database.

RESET BUTTON

We can use Reset Button for the deletion of the data stored in database,it resets the whole database in one go where you don't have to delete the entries.

UPDATE BUTTON
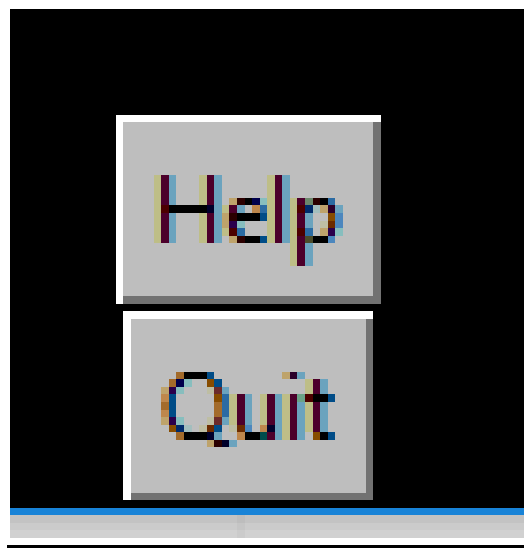

We can also update the given entries with the help of Update Button , if it has some wrong details, it is helpful for later use also

when the user want to update or change the values of the data earlier given.

SEARCH BUTTON

Search Button is also there which can search the details of the person by providing the name of the of the person to be searched.
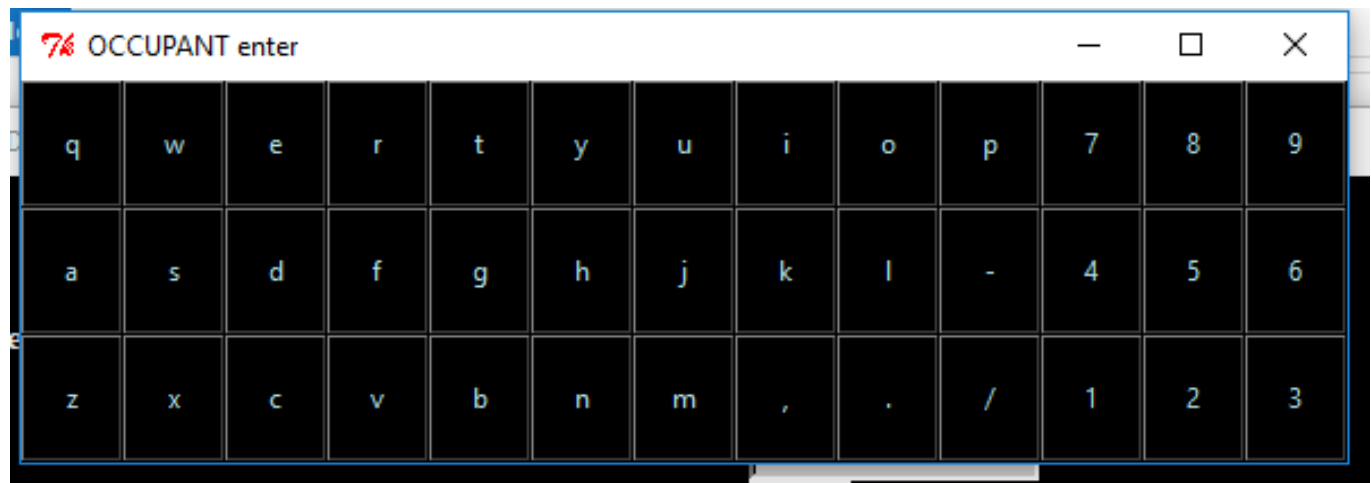

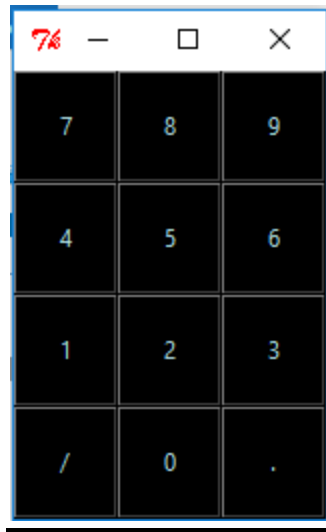

HELP BUTTON

Help Button is there to help the user if it has any problem in understanding the procedure of how this handler works.

THE QUIT BUTTON

At last, it has Quit Button which is used to close the Handler.

ONSCREEN KEYBOARDS

It also has it's own on screen keyboard for entering details of various Entries, if the user is unable to access the keyboard then he/she can access the data or can write the data with the help of mouse itself.
